The Board to Meet Customer Demand

The term "Perfect Panel for the Job" is often used by customers to describe Roseburg UltraBlend and its excellent characteristics. It is a multi-layered substrate produced using a blend of western softwoods and other softwood fiber and particles that deliver the most desirable properties of each species. It is sanded to an extremely smooth, tight, and grainless surface on both sides. The core has a controlled distribution pattern of particles that creates the perfect dimensionally stable panel. Roseburg UltraBlend is engineered to the highest quality standards providing customers with the most desired properties. Roseburg UltraBlend particleboard is produced in a wide variety of sizes and thicknesses.

EXTENSIVE FIELD TESTS CONFIRM THAT ROSEBURG ULTRABLEND OFFERS:

- cleaner edges
- less chip-out
- better machinability for less tool wear
 - smoother finishing
 - more consistent cutting

The Scale to Meet Your Need

Roseburg UltraBlend particleboard is produced at our state-of-the-art manufacturing facility in Dillard, Oregon. This plant has newly installed formers that create better uniform particle geometry and more evenly distributed fibers to produce an extremely smooth, tight, consistent panel face and back. The recent addition of the industry's newest automatic on-line grading system takes the human element out of this important process, resulting in a whole new level of consistent quality.

Roseburg's Dillard, Oregon complex is the single largest integrated wood products manufacturing facility in North America. Our unique vertical integration allows for complete quality control and gives us the ability to produce a substrate that meets our customer performance and price expectations.

Our manufacturing team is an experienced group of professionals who take great pride in every product they produce. You are secure in knowing that we will provide a consistent, uninterrupted supply of the finest particleboard produced. (Roseburg is your single source producer.)

The Perfect Substrate for the Job

Particleboard produced from western softwood fiber is universally known as the premier substrate for industrial, residential, and architecturally specified

applications, including: cabinets, fixtures, furniture components and countertops. In fact, we are our own best customer. The high-quality Roseburg UltraBlend you buy from us is the same substrate we use to produce our Roseburg Melamine. It's manufactured to our own demanding specifications for trouble-free production in your facility.

Environmental Certifications

It has been verified and certified by both the Composite Panel Association (EPP) and the Scientific Certification Systems (SCS) that Roseburg UltraBlend particleboard is produced using 100% pre-consumer recycled fiber content (fiber basis). In addition, UltraBlend meets the new July 1, 2006 EPP-CPA 02-06 formaldehyde emission requirement of 0.20 ppm.

One-Stop Shopping

Roseburg UltraBlend and Roseburg Melamine, as well as our full line of panel products, can be ordered in mixed shipments, saving both time and money. You can enjoy the convenience of one-stop shopping and the practical advantages of lower inventory and flexibility in product mix and panel sizes. This enables you to offer better service and quicker turn-around time to your clients.

Integrated From Forest to Finish

Roseburg is a company with over 3500 employees and 750,000 acres of sustainably managed timberland. Our experience and resources are unmatched. Vertical integration from the forest to the final customer gives Roseburg Forest Products unique control over its product supply and quality. Millions of dollars in capital investment over the past two years enable us to offer a particleboard product that meets the needs of our customers and our own panel processing requirements.

Roseburg UltraBlend: When and Where You Need It

Roseburg has the largest and most respected network of stocking distributors in North America. Call us today for more information, or see our website: www.rfpco.com
